

## Quiz 2

### Descriptive

$$\begin{cases} u_x - 2uy = u^2 \\ u(x, 0) = 1 \end{cases}$$

The Characteristics Eqn is given by

$$\begin{cases} x'(t) = 1, & x(0) = 0 \\ y'(t) = -2, & y(0) = 0 \\ z'(t) = z^2(t), & z(0) = 1. \end{cases}$$

3 - marks for writing all three correctly.  
(1 - for each Equations)

then we get

Solving

$$\begin{cases} x(t) = t + 5 \\ y(t) = -2t \end{cases} \rightarrow (*)$$

$$\frac{1}{z(t)} = 1 - t \Rightarrow z(t) = \frac{1}{1-t}$$

2 mark for writing all of the above correctly.  
(you can give 1-mark even out of above 3- if one of the Eqn. is correct).

Therefore eliminating 't' from 'z(t)' we get

$$x(x, y) = z(t) = \frac{2}{2+y}$$

1 marks for getting this.

Eliminating 't' from (\*) above  
correct.

we get

$$y + 2x = 25.$$

is the Equation of the Projected characteristics from  $(2,0)$ , which are parallel lines with gradient  $(-2)$ .

They do not intersect.

Or, If some one says as the Eqn is Semilinear. for which we know Projected characteristics do not intersect.

(marks).

Give them 1
